Dear Sir,

IAEA – Technical Cooperation Programme – 2018 - 2019
National Project Concepts to Use Nuclear Technology in the Field of Medicine

The Sri Lanka Atomic Energy Board (SLAEB) is in the process of upstream planning for the IAEA Technical Cooperation Programmes of 2018-2019. The SLAEB wishes to obtain project concepts for the programme, to assist national institutes in order to secure IAEA Technical Assistance. The IAEA Technical Assistance will be provided to nationally important projects where nuclear technology can be used to achieve the envisaged objectives of the project.

IAEA will provide Technical Assistance in the forms of training, fellowships, expert services and equipment for a successful project, the IAEA will allocate a budget in the range of US\$ 100,000/= to US\$ 200,000/= for the implementation period. The projects are initially for duration of 2 years and extensions may be applied for further year depending on the progress of the project.

Such project concepts should be identified by the project counterpart from your institute who is responsible for preparing the project concept and if necessary, IAEA will communicate on-line for necessary improvements. Evidence of national commitment and other national or international stakeholder's commitment will support for the criterion of the IAEA acceptance of national projects for their assistance.

The project should be nationally important and should have links to the national development plans and the Country Programme Framework (CPF) which highlights the areas where the IAEA assistance could be obtained during the next five year period.

The Country Programme Framework, the guideline for the Planning and Design of the IAEA 2018-2019 Technical Cooperation Programme and National Project Document Template to be filled by the prospective project counterparts for forwarding to the SLAEB on or before 30 April 2016 can be downloaded through the SLAEB website mentioned below.
