General Circular No: 01-01/2022

Provincial Secretaries of Health
Provincial Directors of Health Services
Regional Directors of Health Services
Heads of all Institutions / Hospitals

Population Empanelment for Delivery of Primary Health Care to Achieve Universal Health Coverage

This is further to the circular issued on “Reorganization and Strengthening of Primary Care Service Delivery System to Achieve Universal Health Coverage” No. 01-18/2019 dated 07th March 2019.

In order to provide patient-centred equitable health services to the population of Sri Lanka and to increase utilization of primary care services especially with a view to providing high quality continued care closer to people’s homes with special reference to Non-Communicable Diseases (NCDs) and minimize out of pocket expenditure, reorganization of primary health care has been initiated in 2019. Population empanelment has been carried out to facilitate this process.

Population Empanelment:

By definition empanelment is an on-going and deliberate set of actions scientifically carried out to identify, register, and actively review and update data describing the group of people assigned to the primary health care facility. A list of people assigned to a given health care facility is called a panel. Thus, effective empanelment has 3 components: (1) identify, (2) register and (3) actively review and update panel data.

As a first step, the population [by Grama Niladari (GN) divisions] assigned to every Primary Medical Care Institution (PMCI) in the country and the referral institution for each PMCI has been identified for the entire country based on the following principles:

- Empanelment of a population to PMCIs is carried out within a district.
- The total population of a GN division would always be empaneled to a single PMCI.

c) The population of a given GN division would be assigned to the closest institution based on travel times.

d) All levels of institutions within a district other than the specialized institutions (eg: children's hospitals, mental hospitals, hospitals for women, eye hospital, cancer hospitals etc.) are utilized for empanelment.

GN divisions allocated to each health institution were shared with PDHS and RDHS for reviewing. The verified data after active reviewing by the relevant PDHS and RDHS are given in the annexure.

You are hereby instructed to adhere to the empanelment data provided here when delivering care to the population as well as for monitoring and evaluation purposes. Any change in the empanelment data should only be carried out with the prior approval of the Ministry.

It is the responsibility of the Heads of the institutions, RDHS and above health hierarchy to make healthcare institutions appealing to the public in view of premises, the basic equipment, referral facilities and continuous follow up.

All PMCIs are expected to provide all services identified in the Sri Lanka Essential Service Package (SLESP) at PMCIs, inclusive of all appropriate laboratory technology as well as essential drugs.

Physical infrastructure development should be carried out in accordance with General Circular No. 01-29/2018 on 'Physical space norms for Primary Health Care Facilities' which has specified the minimum levels.

It should be noted that this mechanism aims to give people the opportunity to access healthcare services closer to home enabling them to manage their time and money more efficiently and to adapt it based on the wish of people.
