Background and justification

The Ministry of Health of Sri Lanka has consistently pursued initiatives aimed at strengthening the country's healthcare delivery system and ensuring equitable, accessible, and comprehensive healthcare services. In line with this vision, the Essential Services Package (ESP) was introduced in 2019 to enhance the quality and reach of Primary Health Care (PHC) services. Strengthening PHC, along with secondary and tertiary care services, is essential to sustaining Sri Lanka's health achievements and progressing toward the Sustainable Development Goals (SDGs). The ESP provides a guiding framework to ensure that all citizens, irrespective of geographical location, receive consistent and comprehensive healthcare services.

In March 2020, the Ministry issued the circular titled "*Facilities Offered at Different Categories of Medical Care Institutions,*" which specifies the services to be provided at each level of the healthcare system. These service definitions were developed through broad consultations with key stakeholders. Together, the ESP and this circular laid the foundation for the classification of services across Primary Medical Care Units (PMCU), Divisional Hospitals (DHH), and apex-level hospitals such as Base Hospitals (BH), District General Hospitals (DGH), and Teaching Hospitals (TH).

The effective implementation of these policy documents required the identification and provision of both human and physical resources. The human resource requirements were previously addressed through the *Cadre Norms 2021*, developed with the technical support of the World Health Organization (WHO). In parallel, attention was focused on identifying physical resource needs, specifically medical equipment (excluding laboratory equipment), to operationalize the ESP and the 2020 circular across all levels of care.

The identification of physical resources for Primary Health Care Institutions (PMCU and DHH) was conducted by the office of the Deputy Director General (Medical Services II) and the Director (Primary Care Services). Their findings will be presented in a separate report. Concurrently, during the 2022–2023 biennium, the Directorate of Planning, with financial and technical support from WHO, undertook a comprehensive activity to identify the medical equipment requirements for Base Hospitals (both Type A and B). The initial aim was to complete the standardization process across all tiers of care during that biennium. While the equipment lists for Base Hospitals were finalized within this period, additional efforts were necessary to address the remaining hospital categories.

In order to complete the standardization of medical equipment norms across all tiers of the healthcare system, the Directorate of Planning initiated a new phase of work during the 2024–2025 biennium to identify the required medical equipment (excluding laboratory equipment) for

Medical equipment Norms

District General Hospitals (DGHs) and Teaching Hospitals (THs). These institutions serve as critical referral centers for patients requiring advanced and specialized care, making it essential to equip them appropriately for their service mandates.

The methodology adopted for this activity included a review of existing documentation and policy guidance, supplemented by a series of structured stakeholder consultations. Consultative meetings were conducted. These sessions brought together a wide range of stakeholders including officials from the Ministry of Health, such as the Deputy Director General (Planning), Director (Planning), relevant Deputy Director Generals (DDGs), and Directors, alongside Hospital Directors, senior consultants and specialists, representatives from professional medical colleges, and hospital matrons. These stakeholders contributed expert input based on institutional mandates and clinical service requirements.

Upon conclusion, the documents will be submitted for official endorsement. Finalized versions will then be prepared for publication, with printing support provided by the WHO Country Office. Each report will be structured according to the tier of care, enabling ease of use for planning, procurement, and policy implementation purposes.

This initiative culminated in the comprehensive documentation of standardized medical equipment norms for Base Hospitals, District General Hospitals, and Teaching Hospitals in Sri Lanka. The publication will serve as a national reference for resource planning, infrastructure development, and capacity building. It is expected to improve operational efficiency, reduce redundant or inappropriate procurement, and ensure that hospitals are equipped in alignment with their designated roles. Ultimately, this initiative marks a critical step in advancing Sri Lanka's commitment to Universal Health Coverage (UHC) and the achievement of the SDGs.

	Operative Instruments
	General Surgical Instruments
	Scalpel and Blades (e.g., #10, #15, #11 blades) – Essential for incisions.
	Metzenbaum and Mayo Scissors – Used for cutting tissues and sutures.
	Adson and DeBakey Forceps – Precision grasping and tissue handling.
	Needle Holders (e.g., Castroviejo, Mayo-Hegar) – Important for suturing.
	Hemostatic Clamps (e.g., Mosquito, Kelly, and Crile) – Used to control bleeding.
	Retractors (e.g., Army-Navy, Senn, Skin Hooks) – Exposes surgical areas.

Medical equipment Norms

	TH
	Microsurgery Instruments
	Micro Needle Holders – For precise suture placement in small structures.
	Micro Scissors – Extremely fine scissors for delicate tissue handling.
	Micro Forceps – For fine grasping of tissues and sutures.
	Aneurysm Clips – Used to clamp small vessels during microvascular surgery.
	Specialized Plastic Surgery Instruments
	Dermatomes (e.g., Zimmer Dermatome) – For skin graft harvesting.
	Rongeurs and Bone Cutters – For shaping bone and cartilage.
	Freer Elevators and Rasp – Used in rhinoplasty and other contouring surgeries.
	Tumescent Cannulas and Liposuction Cannulas – For fluid infiltration and fat removal.
	Cleaning and Sterilization Devices
	Sterilization Equipment
	Autoclaves (e.g., Steris AMSCO, Tuttnauer) – Steam sterilization for surgical instruments.
	Ethylene Oxide (EtO) Sterilizers – Low-temperature sterilization for heat-sensitive instruments.
	Hydrogen Peroxide Plasma Sterilizers (e.g., Sterrad) – Used for delicate equipment requiring cold sterilization.
	Ultrasonic Cleaners – Cleans small and complex instruments by using ultrasonic waves.
	Disinfection Devices
	Automated Endoscope Reprocessors (AER) – Used for disinfecting endoscopes and other reusable instruments.

Medical equipment Norms

	TH
	Chemical Sterilants (e.g., Glutaraldehyde, Peracetic Acid) – Used for high-level disinfection.
	Instrument Cleaning Devices
	Washer-Disinfectors – Mechanical cleaning and disinfection before sterilization.
	Instrument Air Dryers – For drying instruments to prevent rusting post-cleaning.
	Storage Devices
	Instrument and Supply Storage
	Instrument Trays (e.g., Mayo trays, perforated and solid trays) – For organizing instruments on the sterile field.
	Sterilization Containers (e.g., Case Medical Sterilization Containers) – Rigid containers for storing and transporting sterile instruments.
	Instrument Cabinets – Enclosed cabinets for sterile and non-sterile instrument storage.
	Catheter and Tubing Holders – Organizes catheters and tubing in the operating room.
	Specialty Storage Units
	Warming Cabinets – Keeps fluids, blankets, and linens at body temperature for patient comfort.
	Refrigerated Cabinets – Used for storage of medications, biological materials, and fat grafts.
	Supply Carts (e.g., anesthesia carts, crash carts) – Mobile carts for organizing and storing surgical supplies.
	Suture Cabinets – Designed to store different types and sizes of sutures.
	Other Essential Theatre Equipment
	Laser Systems

Medical equipment Norms

	VAC Therapy (e.g., KCI V.A.C. Ultra)
	PDS II Sutures
	Dermabond Adhesive
	Scissors
	General Surgical Scissors
	Mayo Scissors – Heavy-duty, often used for cutting tough tissues or sutures.
	Metzenbaum Scissors – Delicate scissors for fine tissue dissection.
	Iris Scissors – Small, sharp scissors for detailed, fine tissue work
	Microsurgical Scissors

Medical equipment Norms

	TH
	Castroviejo Scissors – Fine scissors with long handles, used in microsurgery for delicate tissue cutting.
	McPherson-Vannas Scissors – Very fine scissors for cutting extremely delicate tissues, often used in eye and vascular surgeries.
	Potts Scissors – Angled scissors for cutting vessels and tissue in confined spaces.
	Specialty Scissors
	Cottle Scissors – Long, slender scissors used in rhinoplasty and nasal surgeries.
	Plastic Surgery Scissors (e.g., Stevens Tenotomy Scissors) – Used for precise cuts in small areas, such as facial plastic surgery.
	Scalpel Types
	No. 10 Blade – Curved blade, typically used for large incisions.
	No. 11 Blade – Triangular blade for punctures and precision cutting, commonly used in hand and facial surgeries.
	No. 15 Blade – Small, curved blade for short, precise incisions.
	Beaver Blade – Small, straight, or angled blade often used in delicate procedures and microsurgery.
	Dermatome Blades – Specialized blades for skin graft harvesting (e.g., Zimmer Dermatome)
	Needle Holders
	Mayo-Hegar Needle Holder – Versatile, commonly used for suturing tissues in general and plastic surgery.
	Castroviejo Needle Holder – Fine-tipped needle holder with a spring handle, ideal for delicate microsurgical procedures.
	Webster Needle Holder – Short, fine-tipped, commonly used in facial plastic surgery.

Medical equipment Norms

	TH
	Mathieu Needle Holder – Has a unique ratchet lock and is used for handling small needles, especially in dental and cleft surgeries.
	Micro Needle Holders – Specifically designed for microsurgery, allowing precise control of tiny sutures
	Forceps
	General Forceps
	Adson Forceps – Fine, toothed or smooth tip, used for grasping delicate tissue.
	DeBakey Forceps – Smooth forceps with atraumatic teeth for handling delicate tissue and vessels.
	Brown-Adson Forceps – Multiple fine teeth, ideal for skin and subcutaneous tissue.
	Microsurgical Forceps
	Castroviejo Forceps – Fine-tipped forceps used in microsurgery for handling small vessels and delicate tissue.
	Jeweler’s Forceps – Extremely fine, precision forceps, ideal for handling minute structures in microsurgery.
	Cohen Bipolar Forceps – Used in microsurgery with an insulated design to allow for bipolar cauterization.
	Specialty Forceps
	Cottle Forceps – Used in nasal surgeries and rhinoplasty.
	Bonney Forceps – Heavy-duty forceps for grasping dense or tough tissue.
	Micro Instruments
	Micro Needle Holders and Scissors
	Micro Needle Holders (e.g., Castroviejo, Barraquer) – Designed for precise suture handling in very small, delicate structures.

Medical equipment Norms

	TH
	Micro Scissors (e.g., Vannas, Castroviejo Scissors) – Ultra-fine scissors used for delicate dissection in microsurgery
	Micro Forceps
	Fine-Tipped Micro Forceps – For handling fine tissue and sutures under a microscope.
	Micro Vessel Clamps (e.g., Acland and Yasargil) – Specialized clamps for temporarily occluding vessels during microvascular anastomosis.
	Vessel Dilators and Other Microsurgical Tools
	Micro Vessel Dilators – For dilating small vessels during microvascular anastomosis.
	Vessel Loops and Suture Passers – Used to secure or manipulate small vessels and tissues.
	Microvascular Coupler – Used for joining small vessels, essential in free flap reconstructions.
	Instruments for Cleft Surgery
	Brodie Cleft Palate Hook – Used to retract tissue during cleft palate repair.
	Kilner Needle Holder – Shorter, finer holder used in cleft surgeries for precise suturing.
	Minnesota Retractor – Used to retract cheeks during intraoral procedures.
	Molt Mouth Gag – Holds the mouth open during cleft palate repair.
	Gorney Suction Elevator – Suction and retraction in one instrument for use in cleft and facial surgeries.
	Periosteal Elevator (Freer) – Commonly used for lifting periosteum and preparing tissue around bone for cleft repairs.
	Instruments for Lymphatic Surgery

Medical equipment Norms

	TH
	Super microsurgical Instruments – Extra fine tools designed for ultra-precision in lymphatic surgery.
	Super microsurgical Scissors and Forceps – For handling extremely fine lymphatic vessels (0.5-0.8 mm).
	Lymphatic Vessel Clamps – Used to occlude lymphatic channels temporarily.
	Lymphatic Vessel Dilators – Dilates small lymphatic channels to facilitate anastomosis.
	Fluorescence Imaging Systems (e.g., SPY Elite, IC Green) – For intraoperative mapping of lymphatic channels using fluorescence.
	Microvascular Couplers – Used for connecting tiny lymphatic vessels in lympho venous anastomosis (LVA
	Instruments for Free Flap Surgery
	Vascular Instruments
	Microvascular Clamps (e.g., Acland, Yasargil) – Used to occlude small vessels during anastomosis.
	Microvascular Anastomosis Clamps – Lightweight clamps with gentle closure for free flap surgery.
	Vessel Dilators and Forceps – Fine-tipped tools for handling and positioning vessels.
	Other Tools for Free Flap Surgery
	Doppler Ultrasound Probe – Intraoperative monitoring of blood flow in flap vessels.
	Microvascular Coupler Device – Joins vessels through a ring-and-spike method, often used for venous anastomosis.
	Skin Markers – For preoperative planning and marking incision lines on the flap.
	Flap Elevators and Retractors – Specialized tools to dissect and lift tissue planes for flap harvest.
	Needle Tip Bipolar Forceps – Fine bipolar forceps for cauterizing small vessels during free flap harvest.

Medical equipment Norms

	TH
	Specialty Instruments for Plastic Surgery
	Dermatomes and Meshers – Used for skin graft harvesting and meshing.
	Skin Hooks – Sharp hooks for lifting and repositioning the skin during surgery.
	Mallets and Osteotomes – For contouring bone in reconstructive procedures.
	Raspatories and Periosteal Elevators – For exposing and shaping bone, commonly used in facial plastic surgeries.
