

Annexure I

This 'Guidelines for Healthy School Canteens' is a joint programme conducted under the technical contribution of the Nutrition Division of the Ministry of Health and Mass Media and implemented with close collaboration with ordination by the Ministry of Education, Higher Education and Vocational Education. This document contains the recommended guidelines for the establishment and maintenance of healthy school canteens in Sri Lanka. It was developed with the aim to establish and maintain student-friendly school canteens that provide healthy food at affordable prices. These guidelines have been developed to ensure that food and beverages served in school canteens meet the recommended nutritional standards for children and adolescents. By adhering to these guidelines, we aim to create a canteen environment that promotes healthy eating habits and contributes to the overall health and well-being of school children. Maintaining school canteens according to proper standards will greatly support the improvement of children's nutritional status and help them maintain healthy eating habits. By following this guideline, we can make the school canteen a place where nutritious food choices are easy to make.
