

Hospital Bed Data

2025

Directorate of Planning
Ministry of Health and Mass media

Message from DDG (Planning)

Effective hospital bed management is essential for a responsive and equitable health system. This initiative was undertaken by the Directorate of Planning in line with the Government's commitment to ensuring the availability of hospital beds for every patient admitted across the country.

The exercise identified key gaps in data generation, management, and analysis related to hospital bed utilization at institutional and district levels. In response, the Directorate of Planning developed standardized indicators and guidelines to support consistent data compilation and to strengthen evidence-based planning and monitoring processes.

This publication is intended to serve as a practical reference for administrators and planners in improving efficiency, optimizing resource utilization, and ultimately ensuring timely access to inpatient care for all patients. It is also envisioned as a foundation for in-depth analysis of institutional performance, service delivery patterns, and resource optimization.

Dr. S. Sridharan
Deputy Director General (Planning)

Message from Director (Planning)

The effective utilization of hospital beds is essential for improving patient experience, strengthening service efficiency, and optimizing the use of limited health sector resources. The adoption of institutional-level, unit-wise bed utilization monitoring and systematic bed management practices is therefore strongly encouraged.

This document is intended to serve as a practical and evolving guide to support routine planning, monitoring, and continuous quality improvement. It is hoped that this publication will contribute meaningfully to improved hospital management and patient care outcomes across the health system.

I extend my sincere appreciation to all Regional Directors of Health Services, hospital administrators, planning units, and Medical Records Divisions for their valuable cooperation and commitment, which made this initiative a success. I also wish to place on record my special appreciation to Dr. Lakshima Nilaweera, Directorate of Planning, for her dedicated efforts in compiling the information and preparing this publication.

Dr. Janaki Vidanapathirana
Director (Planning)

The Directorate of Planning has compiled hospital bed data of government health institutions for the year 2025, covering facilities administered under both the Line Ministry and the Regional Directors of Health Services (RDHS). This exercise was carried out as a complementary initiative to support ongoing planning and management requirements, particularly to ensure the timely availability of updated information.

The bed data indicators used in the preparation of this document are provided in the annex for reference. It is hoped that this publication will serve as a useful resource in strengthening healthcare delivery and optimizing the utilization of hospital resources.

The detailed hospital bed and ICU capacity data included in this publication are presented under the following sections:

| | |

HOSPITAL BED DATA 2025

Summary of the hospital beds

| Description | Total Beds | Inpatient beds |
|-------------------------------------|---------------|----------------|
| Hospitals under Line ministry | 47,737 | 44991 |
| Hospitals under Provincial councils | 41,404 | 36197 |
| Total | 89,141 | 81188 |

Summary of the Intensive Care Units

| Description | Number |
|---|------------|
| ICU beds under Line ministry (excluding Pediatric ICU beds) | 657 |
| ICU beds under Provincial councils (excluding Pediatric ICU beds) | 112 |
| Total | 769 |

Summary of the Bed utilization by Hospital type

| Hospital Type | Bed Occupancy Rate (%) | Remarks |
|---|------------------------|--|
| National Hospitals | 63-77 | |
| Teaching Hospitals | 61 - 87 | |
| Specialized Teaching / National Specialized Hospitals | 85-50 | Maternity, Nephrology 50-65%; Pediatric 50-60% Apeksha 71%, Dental Hospital 85% National Eye Hospital 46% |
| District General Hospitals | 54 -77 | New DGH Matara: Kamburugamuwa is 31% |
| Base A Hospitals | 30-97 | 28% of the hospitals (8 out of 28) have >70% of BOR 57% of the hospitals (16 out of 28) has BOR between 50-70% 15% (4 out of 28) have <50% of BOR |
| Base B Hospitals | 18-110 | 19% of the hospitals (8 out of 43) have >70% of BOR 42% of the hospitals (18 out of 43) has BOR between 50-70% 39% (17 out of 43) have <50% of BOR |
| DHA | 8 - 55 | 36% of the hospitals (24 out of 66) have BOR < 30% |
| DH B | 5-100 | 51% have < 30% (75 out of 146) |
| DH C | 0-100 | 56% have < 30% (155 out of 276); 34 are either functioning as PMCU or zero BOR, 18 have not reported any BOR |

3. Definitions of Indicators: Hospital Bed data

3.1. Total Hospital Beds:

Hospital beds that are regularly maintained and staffed, and are immediately available for the care of patients. The following categories are included under this:

- i. Number of patient beds in the wards
- ii. Beds used for Diagnostic, therapeutic and surgical procedures
- iii. Beds for Obstetric services
- iv. Other functions of care (such as rehabilitative care, long-term care and palliative care)

Excludes the following

- i. Surgical tables, recovery trolleys, emergency stretchers
- ii. Cots for healthy infants
- iii. Beds in wards which were closed for any reason
- iv. Provisional and temporary beds
- v. Beds in residential long-term care facilities

3.2. In patient bed /Inward bed

The inward bed includes all beds in Medical, Surgical, pediatric, Psychiatric and maternity wards, which are immediately available for the care of **admitted patients**. It does **NOT include** the following

- I. Delivery beds in labour room
- II. Healthy newborn beds
- III. Special-purpose beds used for special medical devices, such as the bed for patients on hemodialysis
- IV. Temporary and extra beds

3.3. Inpatient Bed Occupancy Rate (BOR)

It is a measure of the actual use of inpatient beds over a given time period

The occupancy rate is calculated as below.

$$\text{BOR} = \frac{\text{Total number of bed_days during the year}}{\text{Number of (inpatient) beds available X 365}} \times 100$$

Note: Definitions of the denominator and numerators are mentioned below

3.4. Average duration of Stay

It is the average number of days a patient has stayed in hospital for the given year and is calculated as below.

$$\text{Average duration of Stay} = \frac{\text{Total bed days (excluding newborns) for the year}}{\text{Number of patients treated during the period}}$$

Note: Definitions of the denominator and numerators are mentioned below

3.5. Bed Turnover Rate

Number of times on average a hospital (inward) bed has changed a patient during the given year.

$$\text{Bed Turn Over Rate} = \frac{\text{Number of discharged patients}}{\text{Average bed count}}$$

Note: Definitions of the denominator and numerators are mentioned below

3.6. Hospital bed density (per 10 000 population)

It is the number of hospital beds that are available for the catered population for inpatient care.

$$\text{Hospital bed density} = \frac{\text{Total hospital beds for inpatient care X 10,000}}{\text{Toatal Population for the same geographical area}}$$

Definitions of the terms related to denominator and numerators

1. **Total Bed days** =(‘Midnight totals’ + ‘same day discharged totals’) for the period (Data Source: Midnight survey)
2. **Number of patients treated during the period**

This can be calculated either of the following methods

- I. [Number of patients at the beginning of the year +Number of admissions for the year]

Or

- II. [Number of patients discharged (live discharges, Deaths, Transfers and LAMA) + remaining patients at the last day of the year]

Data Source: Admission/Discharge/Midnight survey

3. Number of discharged patients

This includes all Live Discharges; Number transferred out; LAMA and Deaths.

4. Average number of beds

If the number of beds does not change during the period of interest, the average number of beds corresponds to the number of beds at the beginning /end of the period.

In other case, average number of beds are calculated accordingly

$$\left\{ \frac{\text{No of beds before change X No of days the beds used}}{\text{number of days for the period of interest}} + \left| \frac{\text{No. beds after change X No days the beds used}}{\text{number of days in a month}} \right. \right\}$$

END
